

The Game of Cycles

Francis Su, Harvey Mudd College

The Game of Cycles, introduced in my new book *Mathematics for Human Flourishing* (2020), is played on a simple connected planar graph together with its bounded cells, and players take turns marking edges with arrows according to a sink-source rule that gives the game a topological flavor. A group at ICERM REUF 2019 studied this game, and I'll share some of the things we discovered.
