

We will be considering papers mentioned during the “Theory and Practice in Machine Learning and Computer Vision” workshop (Feb 18-22, 2019). We can also consider papers from the “Image Description for Consumer and Overhead Imagery” workshop (Feb 25 – 26, 2019).

The idea is to have an informal discussion about a paper common to our research interests. Ideally, we’d have a volunteer giving a brief 10-minute summary with the big ideas as a warm up. The club is open to anyone who wants to join the discussion.

The paper selected for our first journal club meeting is “Global Optimality in Tensor Factorization, Deep Learning, and Beyond” by Rene Vidal (<https://arxiv.org/pdf/1506.07540.pdf>)
