

## **WebVR Workshop**

Andrea Hawksley, eleVR

In this workshop, participants will create a basic VR enabled website. By using a WebVR enabled browser, these websites can be viewed and interacted with from virtual reality devices such as the HTC Vive, Oculus Rift, or Google Cardboard. Participants who have existing 3D models may be able to simply port them into webVR and immediately view them in 3D from their phones.

Workshop participants may wish to download appropriate software (both a webVR enabled browser and drivers) for any VR devices that they bring. Phones require no special software.
