

# New asymmetric gravity-capillary and flexural waves

Jean-Marc Vanden-Broeck  
University College London

ICERM , April 2017

## COWORKERS

Zhan Wang

Tao Gao

Paul Milewski

Emilian Parau

Olga Trichtchenko

- inviscid, incompressible, irrotational
- gravity
- surface tension
- steady

## NON SYMMETRIC WAVES....in two and three dimensions

- Periodic waves
- Solitary waves
- Generalised Solitary waves

flexural waves (thursday.....Olga.....).

stability

## PART 1

### TWO-DIMENSIONAL FLOWS

## FORMULATION

### GRAVITY-CAPILLARY WAVES

$$\phi_{xx} + \phi_{yy} = 0$$

$$\phi_y = \phi_x \zeta_x \quad \text{on} \quad y = \zeta(x)$$

$$\frac{1}{2}(\phi_x^2 + \phi_y^2) + gy - \frac{T}{\rho} \kappa = B \quad \text{on} \quad y = \zeta(x)$$

$$\phi_y = 0 \quad \text{on} \quad y = -h$$

### FLEXURAL WAVES

$$\frac{D}{\rho} (\partial_s^2 \kappa + \frac{1}{2} \kappa^3)$$

$T$  = surface tension,       $D$  = flexural rigidity

$$\kappa = \frac{\zeta_{xx}}{(1 + \zeta_x^2)^{3/2}}$$

## PERIODIC and SOLITARY waves

### Gravity waves

Craig W. and Sternberg P. (1988)

## Gravity-capillary solitary waves

## NUMERICAL METHODS

boundary integral equation methods, series truncation methods or ANY OTHER METHODS....

1. Iterations by using Newton's method
2. Continuation methods
3. INITIAL GUESS: bifurcations, symmetry breaking...

Dimensionless variables:  $(\frac{T}{\rho g})^{1/2}$  (reference length),  
 $(\frac{T}{\rho g^3})^{1/2}$  (reference time)

amplitude:  $A$

phase velocity:  $c$

energy:  $E$

$$E = \frac{1}{2} \int_{-\infty}^{\infty} \int_{-\infty}^{\eta} (\phi_x^2 + \phi_y^2) dy dx + \frac{1}{2} \int_{-\infty}^{\infty} \eta^2 dx \\ + \int_{-\infty}^{\infty} (\sqrt{1 + \eta_x^2} - 1) dx$$

Boundary integral equation, Newton iterations,  
continuation

## Gravity capillary solitary waves

infinite depth

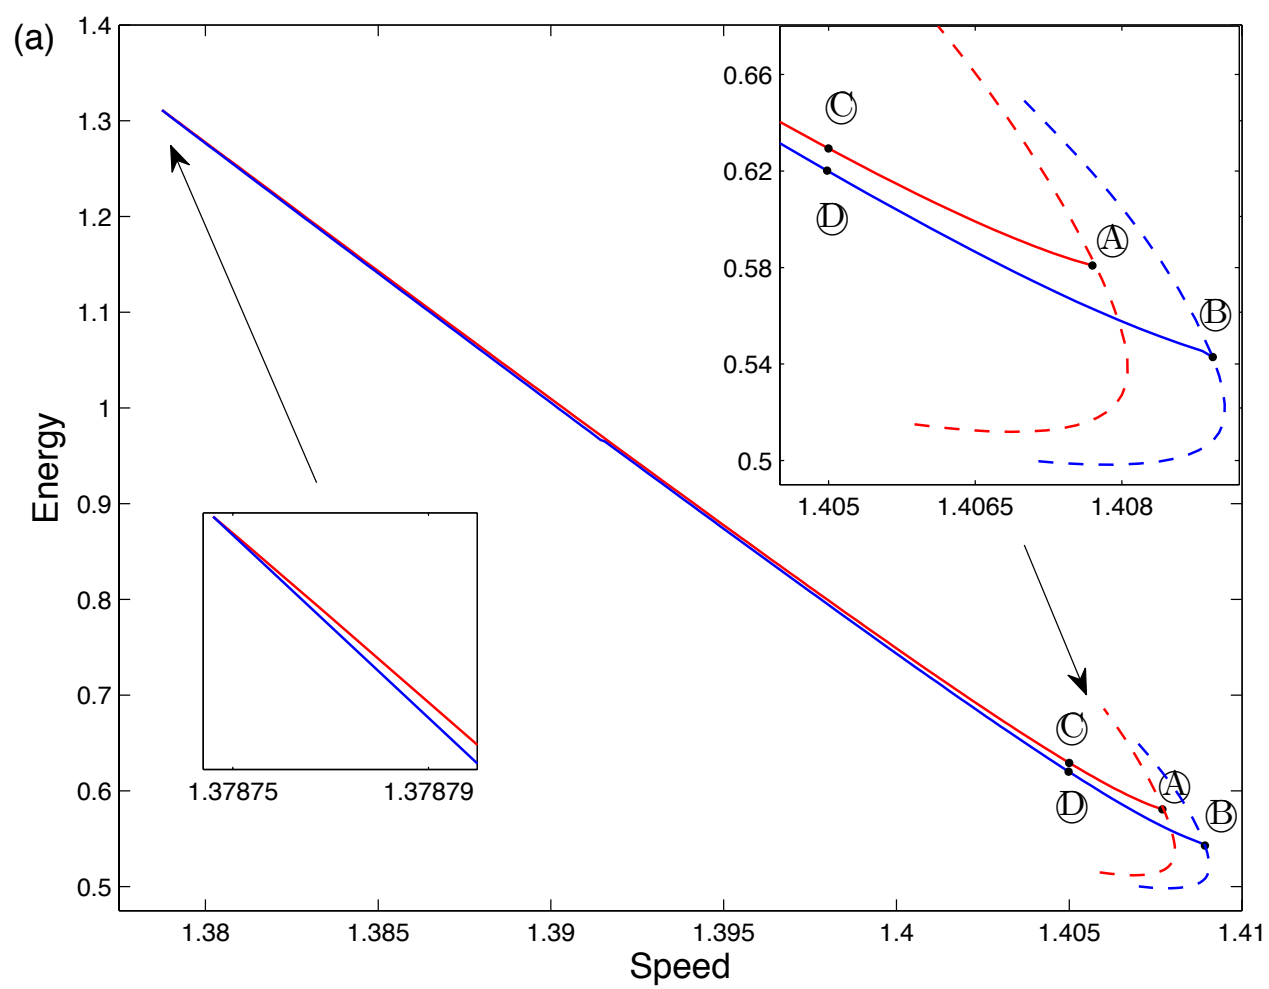

Zufiria (1987), Buffoni, Champneys and Toland (1996), Yang and Akylas (1997), Champneys and Groves (1997).....

# HYDROELASTIC WAVES

Tao Gao, Zhan Wang

## GENERALISED SOLITARY WAVES

Clamond et al, Journal of Fluid Mechanics (2015)  
784, pp 664-680

Wang Z., Parau E.I. , Milewski P.A. and Vdb  
(2014) Proc. Roy. Soc. A 470

Non-symmetric PERIODIC gravity-capillary waves

Tao Gao and Zhan Wang

Zufiria (1987)

Shimizu and Shoji (2012)

## Symmetric waves

## Non-symmetric waves

## Non-symmetric waves

## Non-symmetric waves

## Non-symmetric waves

## THREE-DIMENSIONAL FLOWS

Use Green's theorem instead of Cauchy integral equation formula.

Emilian Parau, Mark Cooker, VdB

Olga Trichtchenko, Paul Milewski, Emilian Parau, VdB

## NON-SYMMETRIC 3D WAVES

Model: Akers and Milewski (2009)

$$u_t + \frac{\sqrt{2}}{2}u_x - \frac{\sqrt{2}}{4}H[u - u_{xx} - 2u_{yy}] + \alpha(u^2)_x = 0$$

Zhan Wang

Three dimensional flexural waves

Olga....

## Conclusions

New non-symmetric gravity-capillary waves for the Euler's equations in 2D (solitary waves)

New non-symmetric flexural waves for the Euler's equations in 2D (solitary waves)

New non-symmetric gravity-capillary waves for a model in 3D (solitary waves)

New non-symmetric generalised solitary waves in 2D

New non-symmetric periodic gravity-capillary waves in 2D
